

Ladislav Bardos is a Professor in electricity at the Division of Electricity, Department of Electrical Engineering (Angstrom Laboratory), Uppsala University, Sweden. He is Co-founder of the Plasma Group with Professor Hana Barankova, focused on the research and development of different plasma sources and plasma applications. Ladislav graduated from the Czech Technical University, Faculty of Nuclear Sciences and Engineering Physics and received his PhD degree in the field of Applied Physics. He designed and developed several patented sources for low and high gas pressures and inside liquids. He teaches several courses at the Uppsala University and abroad, for example, he has taught annual courses for SVC since 1997.
