

**David Holec** received BSc degrees in Mathematics (2002) and Physics (2003) and an MSc degree in Condensed Matter Physics (2005) from Masaryk University in Brno, Czech Republic. After receiving a PhD in Materials Science (University of Cambridge, UK), he joined the Department of Materials Science at the Montanuniversität Leoben, Austria, in 2008. He habilitated in Computational Materials Science (CMS) in 2016, and has been leading the CMS group since 2012. He has (co-)authored more than 200 peer-reviewed publications with more than 5600 citations. His main activities include, but are not limited to, ab initio and atomistic calculations of structural, thermodynamic and functional properties of disordered bulk systems, superlattice effects of thin films and coatings, surface and interface phenomena including grain boundary engineering, and nanoparticles.
